

First-class hospitality begins with hassle-free registration

From the 4th of July 2020, many hospitality and leisure business operators in England will reopen their doors to the public once again.

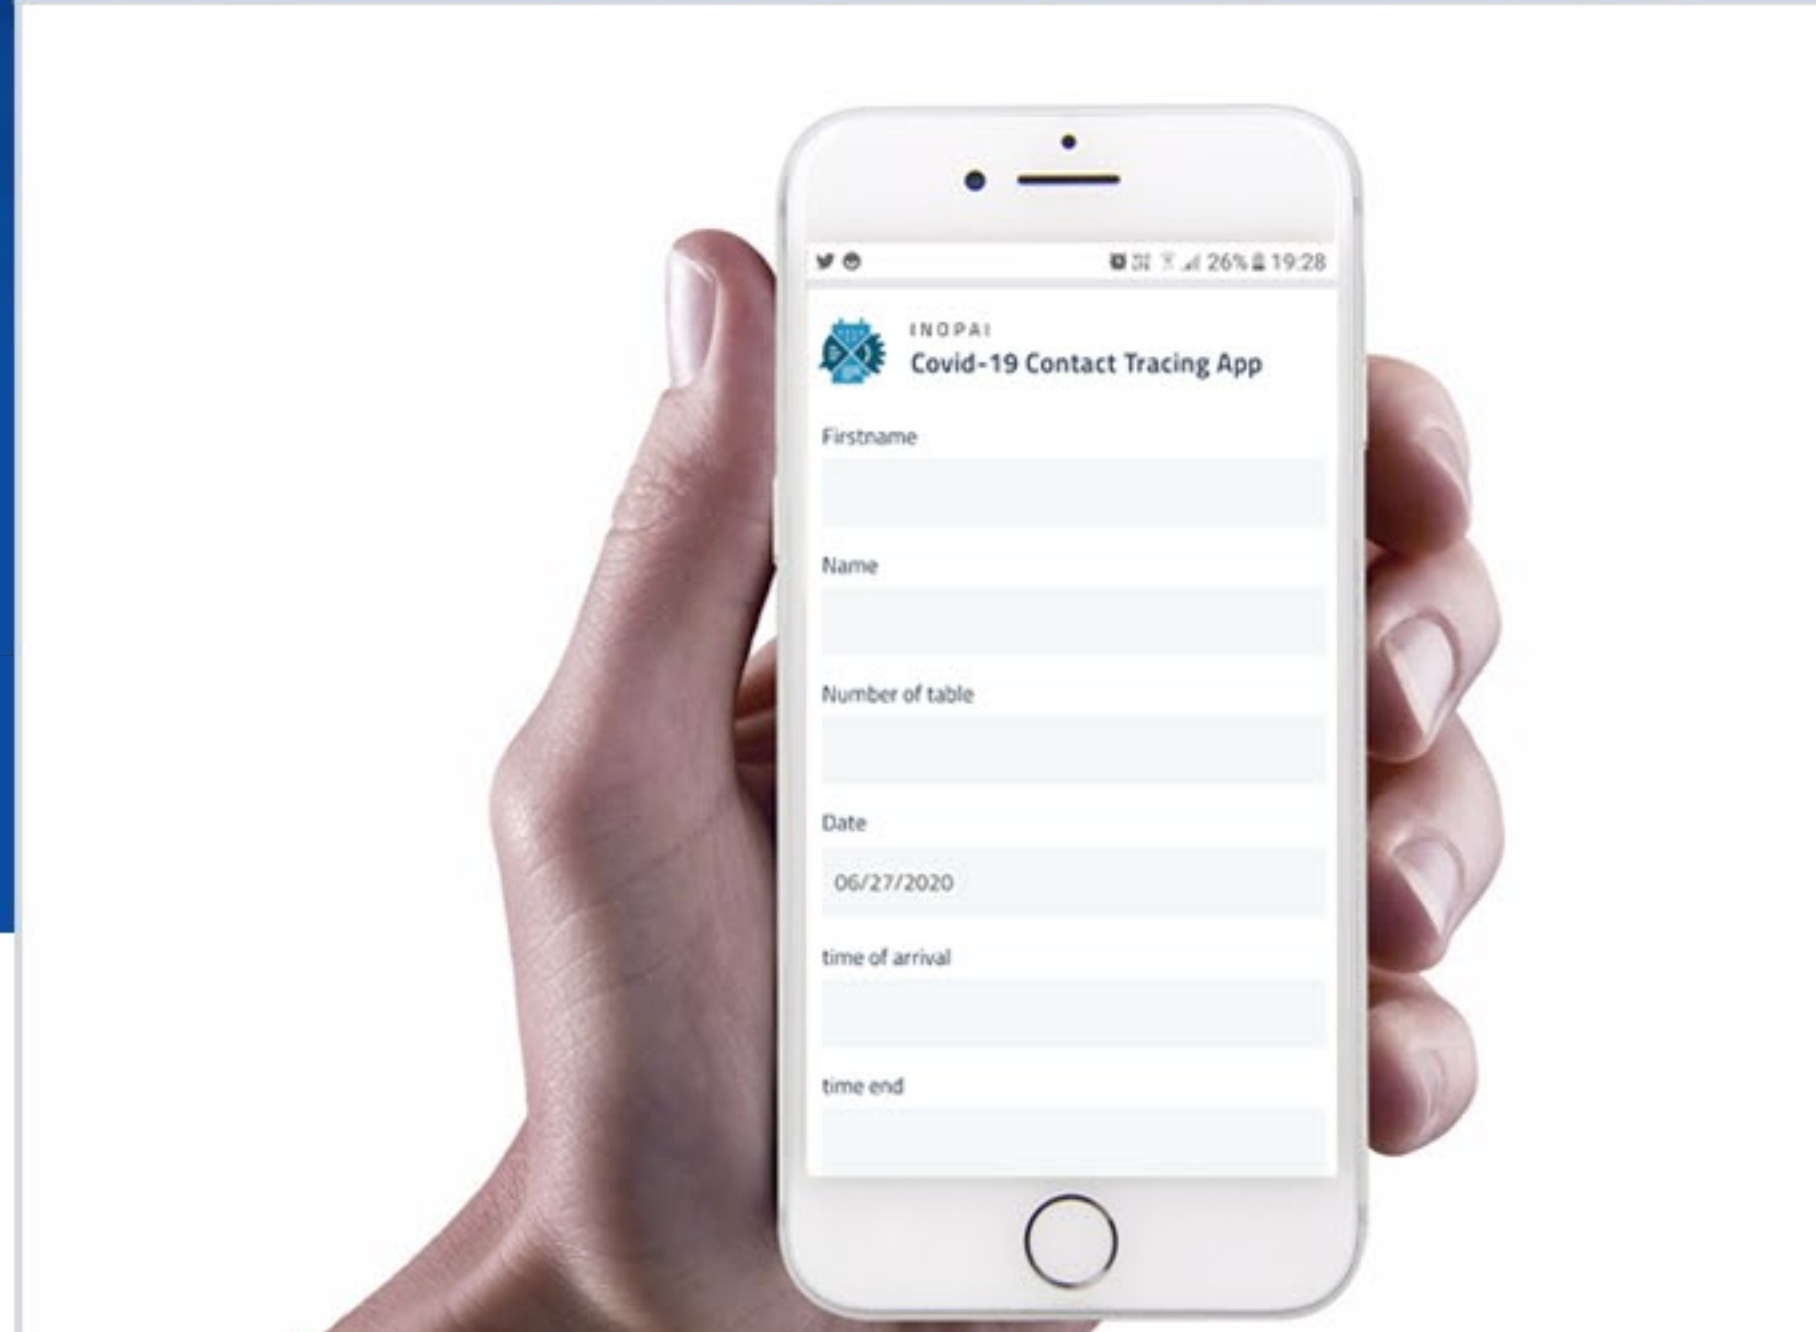

To keep everyone safe and augment NHS Test and Trace efforts, all hospitality venues have been asked to collect and process the following data, with the consent of their customers and guests:

- Name of the guest
- Date and time of the visit
- Contact details (e.g. email address or telephone number)

***This data must be deleted by the proprietor 4 weeks after collection.**

Paperwork is typically hard to manage, expensive to produce and distribute, and has a high risk of contamination. For the purpose of collecting and managing all this data, we are offering a much simpler and user-friendly solution, that can be up and running within **48 hours**...

Introducing INOPAI - A web-based application for paperless registration

Scan the QR Code

Visitors scan a QR code upon arrival with their mobile device. The QR code grants the guest instant access to the online registration form.

Fill out the simple form

The guest enters their personal information on the form, affirms their consent, then completes registration by submitting the data.

Manage registration details

A simple dashboard makes it easy for the proprietor to manage registrations. With an Excel export function, all data can be easily exported and made available to health authorities upon request.

Full Name	Date	Contact Details	Temperature Readings
Conrad Koch	04 Jun 2020	Karlsruhe	36
Florian Reissner	05 Jun 2020	Waldenstraße 16, 76185 Karlsruhe, Deutschland	37
Charles Mayhew	05 Jun 2020	+44 12345678	36
Willy Weber	10 Jun 2020	80719 Hagen, Südwestfalen, Nordrhein-Westfalen	35
Jonathan Zimmer	05 Jun 2020	Karlsruhe, Germany	36

Technical Requirements

To access the web-based application, all you need is an internet connection (such as Wi-Fi or mobile network), and a mobile device. The form is accessed through the web browser of the device, hence no app installation is necessary.

Advantages of a web-based app for the hospitality operator

Simple dashboard with easy manual entry

Guest details can be manually entered by the proprietor in the event the guest is unable to do so themselves. The dashboard presents a clear list of submitted data, making it the central location for both manual entries and self-entered data.

Data is automatically deleted after 4 weeks

The information collected from guests/visitors is completely deleted after 4 weeks. The app does this automatically to protect customer data.

Easy export of data to Excel format

In the event visitor data is required by public health authorities, all data entries can be conveniently exported as Excel files. With just a push of a button, all entries are collated and despatched with ease.

No paperwork

Digital registration and data collection has many advantages. Not only is it environmentally-friendly, but it is cheaper to produce and distribute, and it reduces the risk of cross-contamination or infection to employees.

48-hour quick deployment

The INOPAI solution can be ready to take your first registration within 48 hours. This sort of rapid deployment is vital to help operators receive patrons after lockdown and get back to business in the shortest possible time.

Don't delay, contact us for a demonstration today!
